Briant Sandriano

Computer Science | Universitas Bina Nusantara

Jakarta, Indonesia | 0812-8007-0122 | briantsandriano@gmail.com | https://github.com/Briant-s

Education

Universitas Bina Nusantara — B.S. Computer Science
GPA: 3.86/4.00 |Expected Graduation: 2028
Relevant Coursework: Data Mining, Database Technology, Big Data Processing, Data Engineering, Data Analytics, Data Structures, Algorithm and Programming

Key Skills

Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, FastAPI, Streamlit) | SQL | Data Visualization (Tableau, Power BI) | Machine Learning (SVM, Logistic Regression, Random Forest, CatBoost, Prophet, SMOTE, NLP) | Web Development (React, Tailwind CSS, Mantine, Konva.js) | ETL & Databases (Pentaho, MySQL, Supabase) | Git/GitHub

Projects

AI File Renamer & Organization Tool, *Python (Ollama, Sentence-Transformers, PyTorch)* | Solo

- Built a fully offline CLI tool that reads file contents and uses a local LLM to generate short, descriptive filenames, with structured JSON output enforced via Pydantic schemas.
- Implemented a semantic folder classifier using all-MiniLM-L6-v2 embeddings and cosine similarity, with LLM-based label expansion and confidence gating to route low-confidence files to an unsorted folders bucket.

UMKM Loan Simulation Web App, *React, FastAPI, Supabase, Gemini API* | Team of 5

- Led development (80% of codebase) of a full-stack loan simulation platform for Indonesian SMEs, deployed via Vercel and Railway.
- Built a simulation engine modeling KUR loan schemes, calculating installment composition and loan growth, with automated DTI-based risk flagging and recommendations.
- Integrated Supabase authentication and a Gemini-powered business proposal generator from user-submitted data.

HR Employee Attrition Pipeline, *Pentaho, MySQL, Power BI* | Team of 3

- Built an end-to-end ETL pipeline processing 1,470 employee records, powering a 4-page Power BI dashboard suite (retention, satisfaction, executive cost analysis, demographics).
- Identified key attrition drivers including short-tenure employees and the HR department, informing retention strategy recommendations.

XAI for Phishing Email Detection (Research Paper), *Python, SVM, NLP*

- Built an SVM-based machine learning pipeline with NLP feature extraction to classify phishing emails for a research study on explainable AI's (XAI) effect on human phishing-detection accuracy.
- Co-authored paper currently under review at ICORIS 2026.

Customer Campaign Response Pipeline, *Python, Scikit-learn, Streamlit* | Team of 3

- Built a complete CRISP-DM analytics pipeline (EDA, feature engineering, modeling, evaluation), deployed via an interactive Streamlit dashboard.
- Benchmarked Logistic Regression vs. Random Forest (ROC-AUC 0.83 vs. 0.84); found SMOTE degraded performance and increased false positives on the low-sample dataset.

Project Tracking Canvas Tool, *React, Konva.js, Tailwind, Supabase* | Team of 4

- Served as primary frontend developer, designing the UI and node system using Konva.js for canvas rendering and Tailwind for styling.
- Contributed to canvas and node-connection logic enabling draggable, linkable nodes with embedded task checklists; deployed on Vercel.

Competitions

Samsung Innovation Campus — Advanced to Stage 3/4| Team of 4

- Built a Streamlit-based IoT dashboard with MQTT broker integration for real-time light-sensor streaming data.
- Implemented a Prophet time-series model to detect wasteful lighting usage.

GammaFest 2026 Data Science Competition — Ranked 131/236 | Team of 3

- Developed a football match score prediction pipeline combining CatBoost and Poisson regression.
- Engineered features using rolling statistics and backfilling techniques.

FIT 2026 Data Science Competition | Team of 3

- Performed statistical analysis and feature engineering (encoding, splitting, preprocessing) on a 109-column vector-borne disease dataset to prepare data for ANN modeling.
